scaled to fit the needs and requirements of a small business.

The integration of your Business Strategy and Information Technology is crucial to the success of your business. You expect to leverage your investment in technology and understand new technology that can give you a strategic advantage. You require a trusted advisor to translate the unique needs of your business into a technology strategy that provides you maximum productivity with zero defects.

At ATMP Consulting Group, our methods are practical and proven. We focus on aligning, delivering and implementing an IT Strategy that meets or exceeds your business requirements. Our goal is to assist you in determining the best possible technology solutions to meet your complex business issues from the multitude of options available today.

By leveraging our knowledge, experience, partner relationships, and vast talent base, we provide a best-of-breed IT acumen customized to your business environment-and it is delivered in an affordable, part-time or contingent basis to suit your needs.

Our team brings years of executive technology experience and acumen to you and helps you align your business and technology requirements to maximize your current and future investments.

ATMP Consulting Group provides our clients with industry certified and recognized talent.

ATMP Consulting Group strives to create a positive and valuable experience in every client relationship.

Assessment and Requirements Gathering	Develop Recommendations
Advisory Partnership	Plan and Implement

ATMP Consulting Group offers a solution that focuses on three key dimensions within a small business Information Technology environment; Computing Infrastructure, Operational processes, and Strategic and Tactical direction. Our process is collaborative and includes the following phases:

- **Assessment and Requirements Gathering** – In principle, any small business will benefit from the use of Information Technology. However, there is a question as to what degree your business will benefit. This must be understood before a sound business decision can be made regarding your technology strategy. Our methodology includes site visits, management and employee interviews, and executive level strategy sessions. ATMP Consulting Group will prepare a thorough Definition of Vision and a foundation for strategic technology decisions. The assessment will focus on the following areas:
 - Technology Plan and Strategy – We will assess your Technology Plan and Strategy to determine its alignment to achieve your business strategy. We will develop a detailed gap analysis to better align your business strategy with your technology plan.
 - Process and Procedures – We will analyze how your company utilizes technology, and the corresponding processes and the procedures to support the flow of information and prepare a gap analysis.
 - Software Applications – ATMP will review Financial, Operational, EDI, Desktop, Database, and performance software. Each area will be analyzed and pros and cons developed for each.
 - Web Presence – We will review your current web page performance and requirements, eMail capabilities, and eCommerce capabilities. This will be aligned with your vision to create a tactical web marketing plan.
 - Computing Infrastructure – In order to deliver strategic systems, a compatible computing infrastructure must be in place. ATMP will review the configuration and costs of telecommunications capabilities, network capabilities, application computing platforms, desktop computing platforms, and the overall performance of each.
- **Develop Recommendation** – ATMP Consulting Group will prepare a set of recommendations that leverage industry best practices and the unique vision of your company that are practical and implementable.
- **Plan and Implement** – ATMP will remain your partner during the implementation of the plan, providing oversight and accountability for all components.
- **Advisory Partnership** – Technology Industry Standards are constantly evolving. From our initial meeting, ATMP strives to maintain a long-term partnership as your technology advisor, educator, ally, and advocate.

Every client has unique goals and objectives. The strength and value of our model is that it is flexible and can be sized and adjusted to fit those unique needs and requirements.
